BATTERY CARE
- Do not charge over 6V, the battery will vent in damage.
- Keep away from flammable objects while charging or while the battery is in use.
- Battery may get high temperature during charging up to 140°F (60°C). The battery capacity may decrease by 8-9% of its value after 100 charging cycles. The lithium ion battery's and capacity decrease depends on low temperatures, especially near below ice point. The capacity decreases 5%-12% of freezing (batt. temp increases 80% at 20°C, the capacity decreases 10% by 50°F). Battery performance will return normal when the temperature gain up to 140°F.
- Keep the battery out all and any liquid when charging. Recharge the battery fully after 2 months.
- WARNING
- Do not use the light an longer than 10 minutes.
- Light may get hot when in use.
- Adjust the angle downward to prevent blinding the surrounding vehicle on the public roads.
- Do not recharge the battery while in the warm light to warm.
- Do not drive the light while without warranty.
- Do not disassemle the light and go to the repair.
- Do not flush the liit on and unattended.
- Keep the light away from fire and combustible materials.
- Do not store head units wet when not being used or away from sun.
